

AYHAM ALSAYED

Software Developer

+972598645517 ayham.sayyed.04@gmail.com github.com/AyhamAlsayed Ramallah-Palestine

EXPERIENCE

ASAL Training

- Task-Manager project. A simple web app where users can register, create tasks and assign them to projects, and track progress
- Training tasks(API Calendar, API Repositories, File Handling)

UNIVERSITY WORK

- Simple university enrolment system database using Oracle.
- Simple database of books and their authors to implement OOP principles.
- News website using HTML and CSS.
- Shape library (circle, triangle, rectangle, oval, square, polygon) using javaFX.

PROJECTS

Project-Campus (In Progress)

<https://github.com/AyhamAlsayed/Project-Campus>

- Engineered a scalable backend system using Django REST Framework for a social networking platform.
- Designed normalized database models to support users, communities, posts, comments, and complex interactions.
- Implemented advanced features, including personalized feed logic and activity tracking systems.
- Optimized database performance through query annotations, advanced filtering, and efficient ORM usage.
- Built structured, reusable API endpoints strictly following RESTful principles.
- Implemented access control and permission logic to securely manage user actions and data visibility.
- Collaborated on frontend integration to ensure API consistency and seamless data flow.
- Integrated pagination and filtering to ensure scalable data retrieval and performance.
- Refined error handling and validation to manage edge cases and ensure robust API responses.

Task-Manager

<https://github.com/AyhamAlsayed/Task-Manager>

A web app where users can register, create tasks and assign them to projects, and track progress

- Developed a RESTful backend using Django REST Framework for managing tasks and projects
- Implemented user authentication system (registration, login) with secure access to user-specific data
- Designed relational database models for users, tasks, and projects with proper associations
- Built full task lifecycle management including creation, updates, status tracking (completed/pending), and deletion
- Added support for deadlines and timestamps to track task progress and scheduling
- Implemented filtering and sorting mechanisms for efficient task retrieval based on status, date, and user context
- Structured clean and reusable API endpoints following REST principles and modular backend design
- Implemented validation and structured request/response handling for reliable API behavior

SUMMARY

Computer Science student specializing in backend development using Django and REST APIs. Built and contributed to projects including Project Campus and Task Manager system, along with front-end components. Interested in working on bigger projects, learning new technologies, and gaining knowledge from the people i work with along the way.

EDUCATION

Bachelor of Computer Science Palestine Technical University

2021 - 2026

LANGUAGES

English

Proficient

Arabic

Native

SKILLS

Soft Skills
